

While with another firm, Thomas Walsh was retained as the senior planner and space analyst for the 1999 Kennesaw State University Master Plan, including a significant streetscape and landscape design component. The team was asked to provide a master plan that would allow for eight new academic and administrative spaces over a ten year period. The team also recommended space for residential living on campus.

Once the master plan was complete, TSW was retained to implement major design projects, including:

- The Oval - the focal point of campus
- Nursing Building outdoor study area
- Campus Entry Sign
- Convocation/Education circulation system
- Student Union outdoor sitting area with fountain, small amphitheater, and outdoor lighting
- President's Garden

In 2005, TSW contributed as a subconsultant to the master plan update of this nearly 20,000 student university. Our work focused on open space planning, pedestrian circulation, design guidelines and an illustrative plan.
