

YUCUIYUAN LANDSCAPE DESIGN

Pulandian, China

TSW was hired in 2011 to work on landscape design for a residential neighborhood in the City of Pulandian in China's Liaoning Province. The residential neighborhood has seven residential buildings ranging from six to fourteen stories. It also includes ground floor commercial space at the entry building and a neighborhood center. The total area of the neighborhood is 4.7 acres. An underground parking garage occupies two thirds of the site under part of the residential buildings.

TSW worked on conceptual design, schematic design and design development for the project. The landscape design creates a series of public and private spaces. The finely detailed paths with a variety of materials connect the spaces. The courtyards have many contemporary water features and shade structures throughout creating a tranquil environment. Other amenities include a playground and basketball court for active recreation. The project is now under construction.
