Preliminary Design Plan for:

Rogers Bridge Dog Park

City of Duluth, GA
SCALE: 1" = 30'-0" (SHEET 2/4/11)

TSW was retained by the City of Duluth to plan and design a dog park and surrounding passive park area. The dog park consists of two off-leash areas: one acre enclosed area for small dogs and a two acre enclosed area for large dogs. The remainder of the park includes: a rain garden; bioswale; interactive water fountain; pervious paving area for approximately 30 cars; seating areas; soft surface paths; and pergola structures.

The rain garden and bioswale, two of the other key features of the park, serve as a stormwater detention area that captures rainwater and slowly releases the water into other parts of the park, including ephemeral streams.

TSW services include pre-design, preliminary design, design development, construction documentation, bidding assistance, and construction administration.
